

Increased horse-power, better performance and save more in fuel costs with 80-140km more per tank.

SS Inductions' specialise in cold air induction systems manufactured to the highest standard using the same quality plastics specified by the manufacturers that tolerate the high heat generated within the engine bay and still have an original factory look.

There's no rocket science involved – it's a simple matter of getting cool air into your engine faster and more efficiently.

The Big Mouth™ range of cold air induction systems also includes CNC Billet Aluminium throttle bodies and airflow meters that combine awesome performance results with the 'wow factor' appearance.

Get your car breathing right...

Increase Power, Increase fuel economy...

Add 100km to your range with every tank of gas...

Our News

Walkinshaw Performance And SS Inductions Alliance. Walkinshaw Performance has commissioned Australia's leading Cold Air Induction specialist SS Inductions to manufacture a special OE appearance version of their highly successful Holden VE Growler unit.

This Cold Air Induction - exclusive to Walkinshaw Performance - is manufactured using a low sheen high heat ABS material designed to match other under bonnet parts. In addition to providing substantial performance and fuel economy improvements, the VE Growler lives up to its name by delivering a purposeful induction 'roar'.

The Walkinshaw Performance Cold Air units with their distinctive appearance and badging are available either separately or as part of an upgrade kit for all Holden VE V8 and 6-cylinder models from Walkinshaw Performance outlets throughout Australia and New Zealand.

For more information about the Growler Cold Air Induction and the exclusive Walkinshaw version, visit www.walkinshawperformance.com.au .

OTR Growler Range

The OTR Growler Cold Air Induction is a high performance over-the-radiator system. It uses two extremely efficient inverted cone rewashable pod filters attached to a 'Y-Pipe'. The Y-pipe and filters are housed in a cowling which is specially designed to capture and channel the maximum amount of cool air through the filters and into the throttle body. The cowling clips apart for easy access to clean the filters.

Ford FG Falcon - 6, 6Turbo and V8 Inductions Available

Growler Range

The standard system draws air through an undersized intake to a small opening in a restrictive square shaped airbox that disrupts airflow. SS Inductions' Growler system replaces the restrictive factory airbox altogether with a bigger streamlined airbox that is much more efficient. Together with a larger volume of intake air it provides a more direct path to the motor with a smooth undisrupted flow.

Ford FG 6cyl Turbo Lower Grill

The grill sits directly below the number plate sign. It is exactly the same as the rest of the grill pattern and it's something that Ford do not offer as an option and in fact they don't make it at all for the FG Typhoon Turbo, Strange given the GT and GTP have it as standard and also the grill is all that's protecting the intercooler.
